WE LOOK FOR

PROJECT ENGINEER MACHINERY

YOUR TASKS

- First 3 years:
Development of a demonstrator unit for alternative fuels in marine applications, as part of a funded research project, including:
 - Definition of individual work packages and preparation of a time schedule
 - Leading a design team of selected engineers from the company's specialist areas
 - Definition of unit main parameters and functions in close cooperation with partners from the maritime industry and science
 - Detailed design of the unit for production and equipment inquiries
 - Reporting for project sponsors and funding bodies
 - Consulting of external companies during fabrication, commissioning and testing
- Afterwards:
Project- and design work for ship newbuilding projects, including:
 - Develop and compare concepts for clean and efficient power/heat generation systems and propulsion/manoeuvring systems
 - Development of Building Specifications (machinery part)
 - Technical negotiations with owners, classification societies, shipyards, suppliers
 - Integration of systems and single components into existing net spaces
 - Coordination of interfaces to other disciplines (especially electric and piping)
 - Elaborate technical specifications for inquiry/order, check and evaluate vendor's quotations

YOUR PROFIL

- Bachelor's or Master's degree in the field of mechanical engineering or an equivalent field
- Several years of professional experience
- Software skills (e.g. MS Office, AutoCAD, 3D design, Inventor, etc.)
- English and German, perfect spoken and written
- Team player

WE OFFER

- Great variety of challenging projects and tasks to expand your own expertise and network
- Fair working time arrangements with flexitime account and the option to work from home in exceptional cases
- Above-average salary for the industry in this area
- Opportunities to develop personally and professionally, e.g. as a project manager
- Regular team events
